
SCROLLS OF MAAT — THE LAB

AI HOOK GENERATOR PROMPT PACK

7 Master Prompts + The Remix Prompt

Calibrated prompts for Claude and ChatGPT that lock AI output to the correct scroll-stop trigger — and generate 10 precision hooks per session.

scrollsofmaat.com

HOW TO USE THIS PACK

Each prompt in this pack has two parts: a System Prompt and a User Prompt. Both are required for the prompt to work correctly.

The System Prompt

This is the instruction you give the AI before your actual request. In Claude: paste this into the system prompt field or at the start of a new conversation. In ChatGPT: paste this as the first message. This sets the behavioral rules the AI will follow throughout the session.

The User Prompt

This is the actual request — the message you send with your specific content details filled in. Replace all bracketed variables with your real information before sending.

The Bracketed Variables

Every [ITEM IN BRACKETS] is a variable you must replace. The quality of your output is directly proportional to the specificity of your input. Generic variables produce generic hooks. Specific, real details produce scroll-stopping hooks.

One Trigger Per Session

Each prompt is calibrated for a single trigger type. Do not mix prompts or ask for all 7 in one session — the AI will produce averaged, diluted output. One prompt, one trigger, one session.

The Remix Prompt

Use this when you already have a working hook and want to explore all 7 trigger variations. Paste your existing hook in, fill in the context variables, and the AI returns 7 rewritten versions with a recommendation.

Works with Claude (recommended) and ChatGPT. Optimized for Claude Sonnet or Opus — these models follow the behavioral rules in the system prompt most precisely.

CONTENTS

Prompt 01 — Pattern Interrupt

Force the brain to stop auto-processing

Prompt 02 — Status Threat & Status Gain

Move toward elevation or away from diminishment

Prompt 03 — Curiosity Gap

Open a question they cannot answer without watching

Prompt 04 — Tribe Signal

Name your people in the first line

Prompt 05 — Proof of Craft

Show a result so good they assume it costs money

Prompt 06 — Specificity Shock

Precise numbers create instant credibility gravity

Prompt 07 — Visual Mismatch

Engineer the contradiction between image and text

The Remix Prompt

Rewrite any existing hook through all 7 trigger lenses

PROMPT 01

Pattern Interrupt

Force the brain to stop auto-processing.

What this prompt does

Use this prompt when you need an opening that breaks the viewer's scroll momentum before they consciously decide to stop. Pattern interrupt hooks work by violating prediction — the brain freezes on the unexpected input.

When to use it

- ◆ Your niche is saturated with similar-looking content
- ◆ You want to open with silence, contradiction, or a mid-sentence drop-in
- ◆ The first visual frame is already doing something unexpected and the hook must match it

SYSTEM PROMPT

Paste this first — before your request.

```
You are a short-form content hook specialist trained in the psychology of
attention and scroll-stopping content. You understand pattern interrupt
theory:

the brain is a prediction engine, and hooks that violate expected patterns
create an involuntary attention freeze. Your job is to write opening lines
that

feel jarring, unexpected, or disorienting in a way that serves the content.

Rules you always follow:

- Never start with "Here is" or "In this video"
- Never use generic growth advice language
- Favor contradiction, unexpected silence cues, mid-sentence entries, or
statements that end with a setup that must be resolved
- Each hook must be usable as the first spoken line OR text overlay
- Output exactly 10 hooks, numbered, no explanations
```

USER PROMPT

Fill in the bracketed variables with your specific details, then send.

Write 10 pattern interrupt hooks for a [short-form video / TikTok / Reel] about the following topic:

TOPIC: [Describe your topic in 1-2 sentences]

NICHE: [Your specific content niche – e.g. "AI content creation for entrepreneurs"]

TARGET VIEWER: [Who you are speaking to – e.g. "solo creators with no team or budget"]

RESULT OR INSIGHT BEING DELIVERED: [What the viewer gets by the end of the video]

Use these pattern interrupt techniques across the 10 hooks (vary the techniques):

- [Silence cue] – implies 3 seconds of silence before a punchy line
- Direct contradiction of dominant niche advice
- Mid-sentence entry (join a thought already in progress)
- Confession or self-contradiction from a confident source
- Statement that cannot be resolved without watching the video

EXAMPLE OUTPUTS

EXAMPLE OUTPUT 1

"[3 seconds of silence] ...I stopped doing everything they told me to do. And then everything changed."

EXAMPLE OUTPUT 2

"Before I show you the system — you need to understand why the thing you are currently doing cannot work."

EXAMPLE OUTPUT 3

"I was wrong about this for three years. Here is what I finally figured out."

Pro tip

For the silence cue technique, indicate it in brackets as [3 seconds of silence] at the start of the hook. When used as a text overlay, the bracket is the direction to the editor — not copy that appears on screen.

PROMPT 02

Status Threat & Status Gain

Move the viewer toward elevation or away from diminishment.

What this prompt does

Status hooks tap the primal social monitoring system. Use this prompt when you want to activate either the avoidance response (threat: "you are missing something that matters") or the approach response (gain: "here is your upgrade"). Bernays identified status-driven motivation as the root of most consumer behavior. It governs content consumption just as strongly.

When to use it

- ❖ You want to attract serious builders who self-select at the decision point
- ❖ Your content reveals a gap between where the viewer is and where they could be
- ❖ You are positioning against a dominant narrative in your niche

SYSTEM PROMPT

Paste this first — before your request.

```
You are a behavioral copywriter specializing in status-driven hooks for short-form video. You understand that humans make decisions to protect or advance their social position. Status threat hooks imply the viewer is missing something that puts them at a disadvantage. Status gain hooks offer a clear pathway to elevation. The best hooks combine both.
```

```
Rules you always follow:
```

- ```
- Status threats are systemic, not personal – attack the system, not the person
- Status gain is specific – name the elevation, not just "success"
- Never use shame as a direct weapon – imply the gap, do not state it
- Use in-group / out-group contrast where it serves the hook
- Output exactly 10 hooks (5 threat, 5 gain), labeled, no explanations
```

## USER PROMPT

Fill in the bracketed variables with your specific details, then send.

Write 10 status hooks for a [short-form video / TikTok / Reel] about:

TOPIC: [Your topic]

NICHE: [Your content niche]

TARGET VIEWER: [Who you are addressing]

THE GAP BEING REVEALED: [What the viewer does not know or has not done yet]

THE UPGRADE BEING OFFERED: [What the viewer gets access to by watching]

Deliver:

- 5 STATUS THREAT hooks – imply the viewer is at risk or behind
- 5 STATUS GAIN hooks – offer clear elevation or competitive advantage

For the threat hooks: target systemic failures ("most creators"), not personal ones.

For the gain hooks: be specific about what the elevated state looks like.

#### EXAMPLE OUTPUTS

##### EXAMPLE OUTPUT 1

*"The thing successful AI creators know about hooks that you were never taught."*

##### EXAMPLE OUTPUT 2

*"While everyone else is posting content, builders are building something that does not need posts."*

##### EXAMPLE OUTPUT 3

*"There is a version of your brand that costs \$0 and looks like it cost \$10,000. Here is how to get there."*

### Pro tip

When filling in THE GAP and THE UPGRADE, be as specific as possible. "The gap is that most creators do not understand retention mechanics" produces sharper hooks than "the gap is that they do not know how to grow."

---

## PROMPT 03

# Curiosity Gap

*Open a question the viewer cannot answer without watching.*

---

## What this prompt does

Loewenstein's information gap theory establishes that curiosity is an aversive state — the brain seeks to close an open loop. Use this prompt when your content contains a counter-intuitive finding, a specific claim the viewer cannot evaluate from prior knowledge, or a result that demands explanation.

## When to use it

- ◆ Your video reveals a surprising finding, experiment result, or unexpected outcome
- ◆ You have data or a specific claim the viewer would not know to be true or false
- ◆ You want to use the conclusion-first structure — state the payoff, withhold the method

## SYSTEM PROMPT

Paste this first — before your request.

You are a curiosity gap specialist for short-form content. You understand information gap theory: curiosity is psychological discomfort caused by awareness of a knowledge gap. Your job is to create opening lines that make the viewer intensely aware of something they do not know — something that feels important to resolve.

Rules you always follow:

- The gap must be specific enough that the viewer knows exactly what question they are trying to answer
- Never use "you won't believe" or "amazing" — these are noise
- Counter-intuitive claims outperform intuitive ones — seek the unexpected angle
- State the conclusion, withhold the method — this is the core structure
- The gap must be resolvable within the video — false gaps destroy trust
- Output exactly 10 hooks, numbered, no explanations

## USER PROMPT

---

Fill in the bracketed variables with your specific details, then send.

```
Write 10 curiosity gap hooks for a [short-form video / TikTok / Reel]
about:

TOPIC: [Your topic]
NICHE: [Your content niche]
THE COUNTER-INTUITIVE FINDING OR RESULT: [What the video reveals that
surprises]
WHAT MOST PEOPLE BELIEVE (THE WRONG ASSUMPTION): [The dominant view being
overturned]
WHAT THE VIDEO ACTUALLY SHOWS: [The real answer, mechanism, or result]

Use these curiosity gap techniques (vary across the 10 hooks):

- State the conclusion without the cause ("Here is why X is not working –
and it is not what you think")
- Make a specific counter-intuitive claim that demands verification
- Name the existence of something the viewer does not know exists
- Reference an experiment or test with a specific, surprising result
- Ask a question the viewer genuinely cannot answer
```

#### EXAMPLE OUTPUTS

##### EXAMPLE OUTPUT 1

*"The reason this video has 40 million views has nothing to do with the content."*

##### EXAMPLE OUTPUT 2

*"There is a 3-second window in every short-form video that the algorithm uses to decide its fate. Most creators never optimize it."*

##### EXAMPLE OUTPUT 3

*"I asked Claude to design my entire content strategy. It told me to stop posting. Here is what it recommended instead."*

### Pro tip

The strongest curiosity gap hooks name a specific number, a specific result, or a specific named thing that the viewer does not yet know. "Something you don't know" is weak. "A 3-second window with a specific name and a specific algorithm function" is strong.

---

## PROMPT 04

# Tribe Signal

*Name your people in the first line.*

---

## What this prompt does

Tribe signals work because of social identity theory — people derive self-concept from group membership. When content explicitly addresses a viewer's specific situation, they experience a recognition response that precedes and overrides content quality evaluation. Use this prompt when you want to speak directly to a defined audience segment in a way that makes them feel seen before you say anything else.

## When to use it

- ❖ Your content serves a specific, definable audience situation
- ❖ You want to filter out casual viewers and attract committed builders
- ❖ Your brand has a cultural or values-based identity worth signaling

## SYSTEM PROMPT

Paste this first — before your request.

You are a tribe signal copywriter for short-form content. You understand social identity theory: people act as members of groups, and content that explicitly addresses a specific group creates instant recognition and belonging.

Tribe signals work through specificity — the more precisely the hook names a situation, the more intensely members of that situation respond.

Rules you always follow:

- Specificity is everything — target situation, not just demographics
- "For the creator with no team and no budget" beats "for entrepreneurs"
- Never make the tribe feel judged — the signal is recognition, not evaluation
- Include both a situation descriptor AND a values signal where possible
- The best tribe signals end with "this is for you" or an equivalent
- Output exactly 10 hooks, numbered, no explanations

## USER PROMPT

Fill in the bracketed variables with your specific details, then send.

Write 10 tribe signal hooks for a [short-form video / TikTok / Reel] about:

TOPIC: [Your topic]

NICHE: [Your content niche]

SPECIFIC AUDIENCE SITUATION: [The exact situation the target viewer is in right now]

SHARED VALUES OR BELIEFS: [What this audience believes that others do not]

SHARED FRUSTRATION: [What this audience is tired of, fed up with, or has tried before]

THE TRANSFORMATION OFFERED: [What this audience member looks like after watching]

Write tribe signals that name:

- Specific situations (not just identities)
- Specific frustrations (not just generic struggles)
- Specific aspirations (not just "success")
- Cultural or values-based identity where relevant to your brand

## EXAMPLE OUTPUTS

### EXAMPLE OUTPUT 1

*"If you are building a brand on TikTok with no team and no studio — this is for you."*

### EXAMPLE OUTPUT 2

*"For the family that is one generation away from generational wealth — if they make the right moves this year."*

### EXAMPLE OUTPUT 3

*"This is for the creator who is serious about the craft, not just the metrics."*

## Pro tip

For the MAAT brand, the tribe signal should reference ancestral wisdom, cultural identity, or the specific situation of building wealth without institutional support. These signals are more powerful than generic creator or entrepreneur language because they create real recognition — not just category matching.

# Proof of Craft

*Show a result so good they assume it costs money.*

## What this prompt does

Proof of craft hooks operate on the gap between perceived production cost and actual resource investment. The cognitive dissonance created by seeing high-quality output attributed to free or minimal resources is the mechanism. Use this prompt when your content demonstrates a result that exceeds resource expectation — AI-generated visuals, rapid production, zero-budget brand work.

## When to use it

- ❖ You have a result to show — a video, brand identity, website, or output that looks expensive
- ❖ Your content teaches a method that produces output beyond what the viewer expects for free
- ❖ You are leading with a case study or portfolio piece

## SYSTEM PROMPT

Paste this first — before your request.

You are a proof-of-craft hook writer for short-form content. You understand signal detection theory in social psychology: high-quality results attributed

to low resources create cognitive dissonance that demands resolution. Your job is to write opening lines that show a result, then reveal a constraint (free, fast, solo, no equipment) — in that order.

Rules you always follow:

- Result always comes before the constraint — never reveal the constraint first
- The constraint must be real and specific — "free tools" beats "affordable tools"
- Include a time element where possible (4 hours, one afternoon, 30 minutes)
- Never overstate — the result shown must be achievable by the viewer
- The hook promises the method: "here is the workflow," "here is the system"

- Output exactly 10 hooks, numbered, no explanations

#### USER PROMPT

Fill in the bracketed variables with your specific details, then send.

Write 10 proof of craft hooks for a [short-form video / TikTok / Reel] about:

TOPIC: [Your topic]

NICHE: [Your content niche]

THE RESULT BEING SHOWN: [Describe the output – e.g. "a full music video," "a brand identity"]

THE CONSTRAINT: [The resource limitation – e.g. "\$0," "no designer," "one afternoon"]

THE TOOL OR METHOD: [What made this possible – e.g. "three free AI tools," "Lovable + Claude"]

THE ANCHOR PRICE (if available): [What this would cost from a professional – e.g. "\$4,000 agency quote"]

Structure the hooks in one of these sequences:

- [Show result] + [reveal constraint] + [promise method]
- [State agency/professional price] + [reveal actual cost] + [offer system]
- [Name the output list] + [remove each production element] + [reveal tool]

#### EXAMPLE OUTPUTS

##### EXAMPLE OUTPUT 1

*"This music video was made for \$0. The agency quote was \$6,000. Here is the entire workflow."*

##### EXAMPLE OUTPUT 2

*"A brand identity — logo, color system, site, content calendar — built in one afternoon. No designer. Here is how."*

##### EXAMPLE OUTPUT 3

*"This AI video looks like it cost \$5,000. It cost nothing. Here is every tool used and the exact order."*

### Pro tip

The anchor price is your most powerful specificity element. If you have a real quote or a real market rate for the work shown, use it. "\$6,000 agency quote" creates more contrast than "expensive." If you do not have a real quote, use the industry standard rate instead.

# Specificity Shock

*Precise numbers create instant credibility gravity.*

---

## What this prompt does

The brain processes odd, specific numbers as measured results rather than estimates. This creates what psychologists call processing fluency disruption — the attention system pauses on unusual precision before deciding whether to continue. Use this prompt when your content has real data: follower counts, dollar amounts, timeframes, usage statistics, experiment results.

## When to use it

- ❖ You have real data — numbers, timeframes, counts — from your own work or experiments
- ❖ You want to establish credibility rapidly with a single opening statement
- ❖ Your content includes a result that can be stated with specific, verifiable numbers

## SYSTEM PROMPT

Paste this first — before your request.

You are a specificity hook writer for short-form content. You understand that specific, odd numbers activate truth-evaluation systems more strongly than round numbers or general claims. Your job is to write opening lines that lead with precise data – real numbers, real timeframes, real results.

Rules you always follow:

- Prefer odd numbers over round ones: \$4,327 feels measured, \$4,000 feels estimated
- Always pair two specifics: time + result, count + outcome, uses + hours saved
- Use brackets to indicate variables that the user must replace with real data
- Never fabricate – these prompts are for real data only
- The specificity must serve the point – not be specific about irrelevant details
- Output exactly 10 hooks, numbered, with brackets marking all variables

## USER PROMPT

---

Fill in the bracketed variables with your specific details, then send.

Write 10 specificity shock hooks for a [short-form video / TikTok / Reel] about:

TOPIC: [Your topic]

NICHE: [Your content niche]

YOUR SPECIFIC RESULT: [The real number – e.g. "went from 340 to 12,400 followers in 47 days"]

YOUR SPECIFIC METHOD: [What produced the result – e.g. "one prompt pack and one posting system"]

YOUR SPECIFIC TIMEFRAME: [How long it took – e.g. "11 days," "one afternoon," "6 weeks"]

SECONDARY METRIC (optional): [A second number that adds context – e.g. "14 hours saved per week"]

Use these specificity patterns (vary across the 10 hooks):

- Time + dollar amount
- Number of uses + hours saved
- Follower count before + after + timeframe
- Cost comparison (what it costs elsewhere vs. what you paid)
- Number of experiments + distilled result count

## EXAMPLE OUTPUTS

### EXAMPLE OUTPUT 1

*"In 11 days using 3 free tools, I made my first \$847 online. Here is exactly what I did."*

### EXAMPLE OUTPUT 2

*"I used this prompt 23 times this week. It saved me 14 hours. Here is the prompt."*

### EXAMPLE OUTPUT 3

*"From [X] followers to [Y] in [N] days. No paid ads. No posting every day. Here is the system."*

## Pro tip

If you do not have real data yet, run the smallest possible experiment first — one week, one method, measured results — before deploying specificity shock hooks. The power of specificity only works when the numbers are true. One successful fact-check destroys the credibility everything else builds.

# Visual Mismatch

*Engineer the contradiction between what they see and what they read.*

---

## What this prompt does

Visual mismatch hooks work through Stroop interference — when two information streams conflict, the brain allocates additional cognitive resources to resolve the contradiction. For short-form video, this means the visual (what is shown) and the text or audio (what is said) must deliberately contradict each other in a way that resolves in the viewer's favor. This is the MAAT Lab's home turf: cinematic AI quality + "free tools" messaging.

## When to use it

- ❖ You have a high-production or AI-generated visual to lead with
- ❖ Your content demonstrates a result that looks expensive but was free
- ❖ You want the brand aesthetic itself to be the first argument for the product

## SYSTEM PROMPT

Paste this first — before your request.

```
You are a visual mismatch hook writer for short-form video. You understand Stroop interference theory: when visual and verbal information conflict, the brain freezes to resolve the contradiction. For content creators, this means: show something that looks expensive, then reveal it was free.
```

```
Show something that looks professional, then reveal it was built alone.
```

```
Rules you always follow:
```

- These hooks are TEXT OVERLAYS or CAPTIONS – not spoken lines
- The visual being shown must genuinely exceed resource expectation
- The mismatch must resolve in the viewer's favor – discovery, not deception
- Each hook is written in two parts: [VISUAL DESCRIPTION] + [TEXT/CAPTION]
- The tension between the two parts is the hook
- Output exactly 10 hooks in the two-part format, numbered, no explanations

## USER PROMPT

---

Fill in the bracketed variables with your specific details, then send.

Write 10 visual mismatch hooks for a [short-form video / TikTok / Reel].

TOPIC: [Your topic]

NICHE: [Your content niche]

THE VISUAL BEING SHOWN: [Describe what is on screen — e.g. "cinematic AI music video," "professional brand identity"]

THE CONSTRAINT TO REVEAL: [The resource limitation — e.g. "\$0 production cost," "built with free tools," "made in one afternoon"]

THE TOOL OR SYSTEM: [What made this possible]

THE BRAND AESTHETIC: [Describe your visual register — e.g. "dark, cinematic, gold aesthetic, ancestral imagery"]

Format each hook as:

[VISUAL: description of what is on screen]

[TEXT/CAPTION: the contradicting overlay]

The contrast between the two lines IS the hook.

## EXAMPLE OUTPUTS

### EXAMPLE OUTPUT 1

*"[VISUAL: Cinematic AI music video plays — editorial quality] [TEXT: 'This cost \$0. Three free tools. Here is the system.']"*

### EXAMPLE OUTPUT 2

*"[VISUAL: Full brand identity — logo, color palette, typography, website] [TEXT: 'One person. One afternoon. No designer. Here is how.']"*

### EXAMPLE OUTPUT 3

*"[VISUAL: Sacred geometry, gold aesthetic, documentary-grade AI visuals] [TEXT: 'Built with AI. Rooted in ancestry. This is The Lab.']"*

## Pro tip

For the MAAT brand specifically, the visual mismatch IS the brand identity. The production quality of the content is itself an argument for the Lab products. Every piece of content you post should operate as a live demonstration that the product works — the mismatch between what people see and what they assume it cost is the proof of concept running in real time.

---

## BONUS PROMPT

# THE HOOK REMIX PROMPT

*Take any existing hook and rewrite it through all 7 trigger lenses.*

Use this prompt when you already have a working hook and want to explore all seven trigger variations before deciding which version to test. Run the existing hook through the remix engine, then compare the seven outputs. The strongest variation for your specific audience and platform context will be immediately apparent.

## SYSTEM PROMPT

```
You are a hook transformation specialist. You understand the 7
psychological
scroll-stop triggers: Pattern Interrupt, Status Threat/Gain, Curiosity Gap,
Tribe Signal, Proof of Craft, Specificity Shock, and Visual Mismatch.

Your job is to take an existing hook and rewrite it 7 times – once for each
trigger type. Each rewrite must preserve the core subject matter and value
proposition while transforming the psychological mechanism that stops the
scroll.

Rules you always follow:

- Each of the 7 rewrites must genuinely embody its trigger type
- Do not add trigger labels after the hooks – keep them unlabeled
- Each rewrite must be usable as a standalone opening line
- The core value proposition must survive all 7 rewrites
- Output the original hook first, then the 7 rewrites, numbered and labeled
```

## USER PROMPT

Fill in your existing hook and context details.

```
Here is an existing hook I want to remix:

ORIGINAL HOOK: "[Paste your existing hook here]"

TOPIC CONTEXT: [What the video is about]

TARGET VIEWER: [Who this is for]

CORE VALUE PROPOSITION: [What the viewer gets from the video]

Rewrite this hook 7 times – one version for each trigger:
```

1. PATTERN INTERRUPT VERSION
2. STATUS THREAT VERSION
3. STATUS GAIN VERSION
4. CURIOSITY GAP VERSION
5. TRIBE SIGNAL VERSION
6. PROOF OF CRAFT VERSION
7. SPECIFICITY SHOCK VERSION

After all 7 rewrites, add one final line:

RECOMMENDED: [Which version you would test first, and why in one sentence]

EXAMPLE INPUT: "Here is how to build a brand with AI tools"

EXAMPLE OUTPUT 1

*"PATTERN INTERRUPT: I was wrong about AI for two years. Here is what finally worked."*

EXAMPLE OUTPUT 2

*"STATUS THREAT: The creators who will still be here in 3 years are using AI differently than you."*

EXAMPLE OUTPUT 3

*"STATUS GAIN: Here is the workflow that lets one person build what a full agency used to charge \$10,000 to deliver."*

EXAMPLE OUTPUT 4

*"CURIOSITY GAP: The thing missing from every 'how to use AI for your brand' video — and why it matters more than any tool."*

EXAMPLE OUTPUT 5

*"TRIBE SIGNAL: If you are building a brand on your own with no team and no budget — this system was built for exactly your situation."*

EXAMPLE OUTPUT 6

*"PROOF OF CRAFT: This brand identity cost \$0 and took one afternoon. Here is the exact AI workflow behind it."*

EXAMPLE OUTPUT 7

*"SPECIFICITY SHOCK: I used 3 free tools and 4 hours to build a brand identity that would have cost \$2,400 from a designer."*

## Pro tip

Run the remix prompt every time you create a new content pillar. The 7 variations are not just hook options — they reveal which trigger type resonates most strongly with your specific audience. Track 3-second retention across

---

*"A prompt is not a shortcut. It is a calibration tool.  
You are not asking AI to write your hooks.  
You are using AI to multiply your understanding of how hooks work."*

---

This prompt pack works best alongside the Hook Science Guide (which explains why each trigger works) and the 100-Hook Vault (which gives you pre-built templates to benchmark your AI-generated output against). All three are part of the Hook Science Vault.

scrollsofmaat.com — The Lab
